Extension Agricultural Weather Report

STATEWIDE CROP SUMMARY
(Data provided by the National Agricultural Statistics Service Crop Progress and Condition Report)

General
There were 6.7 days suitable for field work. Precipitation estimates ranged from little rain in some locations to 4.1 inches in Cape (Miami-Dade County). The average temperature ranged from 48.4°F in Crestview (Okaloosa County) to 75.1°F at Curry Hammock State Park (Monroe County).

Livestock and Pastures
Cattle condition remained mostly good throughout the state. Pasture condition remained mostly fair to good.

Crops
There was some heavy frost reported in some areas, but no negative crop impact. Potatoes were being planted in the north central part of the state. Strawberries were harvested, as well as a number of other fruit and vegetable varieties.

Citrus
Maximum temperatures were in the mid to upper 70s across the citrus growing region. A couple stations received about one half inch of rainfall, but most stations received little to none. According to the January 13, 2022 U.S. Drought Monitor, the entire citrus growing region was drought free. Early, midseason, and Navel oranges; Tango, Orri, W. Murcott, and other minor tangerine varieties; tangelos; and red and white grapefruit were all harvested for the fresh market. Processing plants were receiving field run fruit, and accepting both orange and grapefruit packinghouse eliminations. Grove activities included pulling vines from trees; fertilizing; herbicide application; and general grove maintenance. Irrigation was run frequently in all areas, and canal and irrigation ditch water levels were reported to be low in some locations.
