General
There were 6.8 days suitable for field work. Precipitation estimates ranged from no rain in multiple locations to 1.42 inches in Lantana (Palm Beach County).
The average temperature ranged from 63.0°F in Cross City (Dixie County) to 76.4°F in Key West (Monroe County).

Livestock and Pastures
Dry conditions negatively impacted pastures. Producers were supplying hay and water to cattle. Cattle condition remained mostly good throughout the state.

Fruits and Vegetables
Strawberry harvesting continued throughout the state. Multiple vegetable varieties were planted and harvested throughout the state. Heavy whitefly pressure on tomatoes continued to cause losses due to virus and ripening issues.

Field Crops
Field preparation for cotton and peanuts began in the panhandle. Some field corn planting began in the panhandle, and northern and central peninsula. Sugarcane harvesting continued.

Citrus
Maximum temperatures were warmer than normal across the citrus growing region, with Winter Haven (Polk County) reaching 90°F. Precipitation was minimal, with most stations reporting less than 0.1 inch. According to the March 12, 2020 U.S. Drought Monitor, abnormally dry conditions persisted in much of the northern, western, and central areas, while the southern area and Indian River District remained drought free. Early and Midseason orange harvest was nearly complete, while Valencia orange harvest continued strong, with nearly 2.5 million boxes harvested weekly. Valencia oranges, and red and white grapefruit were being packed for the fresh market, while Honey, Royal, and Tango Tangerines were harvested for the fresh market. Grove activities included fertilizing, hedging, and spraying for prevention of post-bloom fruit drop (PFD). Irrigation was run routinely in all areas. Most trees were in bloom, and even some showed very small fruit.
